

# PHYSICISTS SOLVE

**“Global warming is one of the world’s most serious problems. Physicists like me are tackling it head on. I am looking at ways of generating electricity that do not burn fossil fuels like coal, oil and gas.”**

**“We need to use renewable sources, to slow down the release of carbon dioxide, which contributes to global warming. This has an added benefit: using renewable sources will extend the lifetime of the world’s reserves of fossil fuels.”**
